Michael Faraday. A list of his lectures and published writings. By A. E. JEFFREYS. [Pp. xxviii + 86, with a frontispiece and 6 plates.] (Published on behalf of the Royal Institution by Chapman & Hall Ltd., London, 1960. 42*s*. net.)

THIS is a bibliography of the writings of Michael Faraday. Books, articles, lectures and manuscript lecture notes are recorded here in chronological order. Personal letters and manuscripts in general are not included. It is hoped that this more extensive list may be published in the future. Faraday was a prolific writer and had a very original mind. This book will therefore provide material both for the historian of science and for the physicist

interested in the growth of our ideas on electricity and related topics. There is also a good index.
